Jin Hong Kuan

(646) 917 4997
kuanjh123@gmail.com

Languages: Rust, **Golang**, **Python**, **TypeScript**, **Solidity**
Authorized to work in the U.S. No sponsorship required (O1-A).

Education

B.S. Computer Science (Honors), Math Minor May 2022
University of Minnesota, Twin Cities
- GPA: 3.88/4.00

Experience

Founder **Jan 2026 – Oct 2026**
Bicameral AI, NY
- Built composable spec version-control that enforces legal state transitions, with human signoff on business-logic changes for design partners in proptech and healthtech.
- Custom **Jev**-based semantic extraction pipeline reaches 0.31 top-1 on **SWE-ContextBench** Lite (ranked 3rd), and raised precision to 0.89 from a 0.45 LLM-only baseline enabling reliable lookup.

Senior Backend Engineer **Feb 2025 – Jan 2026**
Azura, Remote
- Engine Team Lead for five backend engineers. Owned on-chain integration, execution, and post-trade **PnL** and **ROI** for spot and cross-chain swaps on a crypto pro-trading platform.
- Built the fault-tolerant **Rust**/**Tokio** service that constructed swap transactions and monitored blocks to confirm settlement on **Solana**, EVM L1/L2s, and integrated an external **RFQ** network for cross-chain settlement.
- Replaced a one-minute **ClickHouse** reload with event-driven **PnL** and **ROI** updates that stayed **under 2 seconds**. **Tokio** priced tokens and synced positions from **250–600 million** transaction rows over 48 hours through **Redis** and **Postgres**.

Senior Software Engineer **Nov 2024 – Feb 2025**
Yuzu Health, NY
- Owned the scheduled claims settlement system and automated PBM billing.

Co-founder / CTO **Oct 2022 – Oct 2024**
Circuit, NY
- Raised a pre-seed round; led a 4-person engineering team developing a patented transaction orchestration and risk-response platform for institutional traders (**Golang**, **AWS**, **Terraform**, **Dapr**).
- Established custom integration with 5 enterprise wallet custodians in accordance with **zero-trust** architecture, allowing for recovery of client funds without taking custody of private keys.

Software Engineer **July 2022 – Oct 2022**
Jump Trading, NY
- Built a **Solana** derivative in **Rust** and **Anchor** so liquidity providers could securitize and sell claims on future market-making fees, extending the **AMM** payoff draft written for that engagement.
